

The TIM Machine: Medical and Recreational Cannabis

For the Medical and Recreational Marijuana Industries, SDK Core's Total Identity Management (TIM) vending machine can help address a number of business challenges, enhance the customer experience and create new revenue opportunities.

Medical Cannabis

The TIM Machine system can easily manage individual patients in a medical cannabis market. New patient on-boarding is simple and effective. By linking patient information to their biometric profile, the system automatically manages access and prescribed purchase amounts.

Recreational Cannabis

TIM is ready to meet the demand for safe and secure access to recreational cannabis. With TIM, it's easy to set up rules based on location, with flexible access options to restricting machine access based on age or time or optional membership, and set maximum purchase amounts as required by regulation.

Regulatory compliance

TIM is capable of managing complex reporting requirements associated with marijuana via a customizable tracking and reporting system that can be configured to meet or exceed state and federal compliance guidelines for the markets served by the owner.

Flexible Payment Options

The TIM Machine supports multiple payment options, including cash, credit cards and mobile touch-less payments. Or, all finances can be virtually removed from the machine by using TIM's built-in private credits system.

More products, greater variety

TIM enables licensees to stock a greater variety of marijuana products, and as a complement to existing offerings. The machine's refrigeration and climate controls ensure products stay fresh.

Easy deployment and placement

TIM Machine's small footprint and ease of transportability offer versatility for placement in a variety of secure environments where medical and recreational marijuana are regularly sold.
